

Cal-GranTM

Introducing fast acting Cal-Gran Blends.

Cal-Gran is a low volatile source of nitrogen fertiliser which is suitable for surface application in a variety of crops and on pasture.

Cal-Gran contains Nitrogen (23.9%N), Sulfur (10.8%S) and Calcium (4.4%Ca). The nitrogen in Cal-Gran offers the benefit of being in two forms; fast acting nitrate for quick plant uptake (7.4 N%) as well as the slower available ammonium nitrogen (16.5 N%).

An added benefit is the fact that Cal-Gran and the range of Cal-Gran blends are not classified as either security sensitive ammonium nitrate (SSAN) products or dangerous goods which means growers do not require a licence to purchase, transport or store these products.

Cal-Gran blends are ideally suited for use in Sugarcane as surface or sub surface application in Green Cane Trash Blanket situations with minimal atmospheric nitrogen losses.

A range of Cal-Gran blends have been formulated to suit both sugarcane nutritional requirements in Queensland and New South Wales as well as horticultural crops throughout eastern Australia.
